

Week 7 – SQLite Database Schema

Database Name: `favorites.db`

Database Type: SQLite

Database Version: 1

Table Name: `favorites`

Table Structure

Field	Data Type	Constraint	Purpose
<code>id</code>	INTEGER	PRIMARY KEY	Unique identifier for each favorite user
<code>name</code>	TEXT	NOT NULL	Stores the favorite user's name
<code>email</code>	TEXT	NOT NULL	Stores the favorite user's email
<code>role</code>	TEXT	Optional	Stores the user's role
<code>department</code>	TEXT	Optional	Stores the user's department
<code>image</code>	TEXT	Optional	Stores the user's profile image

Database Operations

- **Insert Favorite:** Adds a user to the `favorites` table.
- **Retrieve Favorites:** Fetches all favorite users and sorts them by name.
- **Check Favorite:** Checks whether a user exists using their unique ID.
- **Delete Favorite:** Removes a specific favorite using its ID.
- **Delete All Favorites:** Removes all favorite records from the database.
- **Persistent Storage:** Favorite data is stored locally in SQLite and remains available after navigating between screens and restarting the application.

Schema

```
favorites
├── id          INTEGER PRIMARY KEY
├── name        TEXT NOT NULL
├── email       TEXT NOT NULL
├── role        TEXT
├── department  TEXT
└── image       TEXT
```

Description

The Zynxis mobile application uses SQLite for local persistent storage of favorite users. The database is named `favorites.db` and contains a `favorites` table. Each favorite user is identified by a unique ID and includes their name, email, role, department, and image

information. The application supports adding, retrieving, checking, deleting individual favorites, and deleting all favorites.
